

Method and System for E-mail Sender Chain History

ABSTRACT OF THE DISCLOSURE

An enhanced e-mail reader and composer having automatic addressing functions to extract addresses and information regarding previous recipients of chain-forwarded electronic messages and e-mail, and having automatic addressing of new electronic messages in reply to all or some of those previous recipients. The enhanced e-mail reader is also capable of automatically adding these previous recipients to an electronic address book. An enhanced e-mail composer provides an enhanced electronic message header which indicates a chain of addresses for previous recipients of a chain-forwarded message, and interoperates with the enhanced e-mail reader.
